

VDSL2 CO/CPE Router VC-450RT/400LT/RT+ MANUAL

Copyright © 2011 by Rubytech Deutschland GmbH. All rights reserved.

## Trademarks

RubyTech is a trademark of National Rubytech Deutschland GmbH.

Other brand and product names are registered trademarks or trademarks of their respective holders.

# Legal Disclaimer

The information given in this document shall in no event be regarded as a guarantee of conditions or characteristics. With respect to any examples or hints given herein, any typical values stated herein and/or any information regarding the application of the device, RubyTech Deutschland GmbH. hereby disclaims any and all warranties and liabilities of any kind, including without limitation warranties of non-infringement of intellectual property rights of any third party.

# Statement of Conditions

In the interest of improving internal design, operational function, and/or reliability, RubyTech reserves the right to make changes to the products described in this document without notice. RubyTech does not assume any liability that may occur due to the use or application of the product(s) or circuit layout(s) described herein.

Maximum signal rate derived form IEEE Standard specifications. Actual data throughput will vary. Network conditions and environmental factors, including volume of network traffic, building materials and construction, and network overhead lower actual data throughput rate. Rubytech does not warrant that the hardware will work properly in all environments and applications, and makes no warranty and representation, either implied or expressed, with respect to the quality, performance, merchantability, or fitness for a particular purpose. Make sure you follow in line with the environmental conditions to use this product.

Foreword: VDSL2 Point to Point Solution

VDSL2 (Very-High-Bit-Rate Digital Subscriber Line 2, ITU-T G.993.2 Standard) is an access technology that exploits the existing infrastructure of copper wires that were originally deployed for POTS services. It can be deployed from central offices, from fibre-fed cabinets located near the customer premises, or within buildings.

ITU-T G.993.2 VDSL2 is the newest and most advanced standard of DSL broadband wireline communications. Designed to support the wide deployment of Triple Play services such as voice, video, data, high definition television (HDTV) and interactive gaming, VDSL2 enables operators and carriers to gradually, flexibly, and cost efficiently upgrade existing xDSL-infrastructure.

ITU-T G.993.2 (VDSL2) is an enhancement to G.993.1 VDSL that permits the transmission of asymmetric and symmetric(Full-Duplex) aggregate data rates up to 200 Mbit/s on twisted pairs using a bandwidth up to 30 MHz.

VDSL2 deteriorates quickly from a theoretical maximum of 200 Mbit/s (Full-Duplex) at "source" to 100 Mbit/s at 0.3 km (symmetric) and 50 Mbps at 1 km, but degrades at a much slower rate from there and still outperforms VDSL. Starting from 1.6 km its performance is equal to ADSL2+.

#### Attention:

Be sure to read this manual carefully before using this product. Especially Legal Disclaimer, Statement of Conditions and Safty Warnings.

#### Caution:

The VC-400RT+ is for indoor applications only. This product does not have waterproof protection. We do not recommend for harsh environments. If user insist to install it for industrial applications (-20°C  $\sim$  70°C (-4°F  $\sim$  158°F)), please do not use the included commercial-grade power supply. Please use of industrial-grade power supply for industrial applications.

#### Safety Warnings

For your safety, be sure to read and follow all warning notices and instructions before using the device.

- DO NOT open the device or unit. Opening or removing covers can expose you to dangerous high voltage points or other risks. ONLY qualified service personnel can service the device. Please contact your vendor for further information.
- Use ONLY the dedicated power supply for your device. Connect the power cord or power adaptor to the right supply voltage (110V AC in North America or 230V AC in Europe).
- DO NOT use the device if the power supply is damaged as it might cause electrocution. If the power supply is damaged, remove it from the power outlet. DO NOT attempt to repair the power supply. Contact your local vendor to order a new power supply.
- Place connecting cables carefully so that no one will step on them or stumble over them.
   DO NOT allow anything to rest on the power cord and do NOT locate the product where anyone can work on the power cord.
- DO NOT install nor use your device during a thunderstorm. There may be a remote risk of electric shock from lightning.
- DO NOT expose your device to dampness, dust or corrosive liquids.
- DO NOT use this product near water, for example, in a wet basement or near a swimming pool.
- Connect ONLY suitable accessories to the device.
- Make sure to connect the cables to the correct ports.
- DO NOT obstruct the device ventilation slots, as insufficient airflow may harm your device.
- DO NOT place items on the device.
- DO NOT use the device for outdoor applications, and make sure all the connections are indoors. There may be a remote risk of electric shock from lightning.
- Be careful when unplugging the power, because the transformer may be very hot.
- Keep the device and all its parts and accessories out of children's reach.
- Clean the device using a soft and dry cloth rather than liquid or atomizers. Power off the equipment before cleansing it.
- This product is recyclable. Dispose of it properly.

Chapter 1. Complete Installation

## 1.1 Hardware Installation

This chapter describes how to install the VC-400LT/R and establishes network connections. This may install the VC-400LT/R on any level surface (e.g., a table or shelf). However, please take note of the following minimum site requirements before you begin.

### 1.2 Pre-installation Requirements

Before the start actual hardware installation, make sure to provide the right operating environment, including power requirements, sufficient physical space and proximity to other network devices that are to be connected. Verify the following installation requirement:

- Power requirements: DC12V/1A or above.
- The VC-400LT/R should be located in a cool dry place, with at least 10cm(4in) of space at the front and back for well ventilation.
- Place the VC-400LT/R away from direct sunlight, heat sources, or areas with a high amount of electromagnetic interference.
- Check if network cables and connectors needed for installation are available
- Do Not install phone lines strapped together with AC power lines, or telephone office line with voice signal.
- Avoid installing this device with radio amplifying station nearby or transformer station nearby.
- Please note VC-400RT+ internal splitter, can pass through voice spectrum is 0KHz ~ 120KHz.

# 1.3 General Rules

Before making any connections to the VC-400LT/R, note the following rules:

• Ethernet Port (RJ-45)

All network connections to the Router Ethernet port must be made using Category 5 UTP for 100Mbps;

Category 3, 4 UTP for 10Mbps

No more than 100 meters of cabling may be use between the MUX or HUB and an end node.

• Phone Port (RJ-11)

All Phone set connections to the RJ-11 Port must use 24~26 Gauge phone wiring.

• We do not recommend using 28 gauge or above phone line.

# 1.4 VC-400LT/R Connections

The VC-400LT/R can be controlled by a PC. For this purpose, a PC is needed with an Ethernet network interface and a RS-232(D-SUB 9Pin) serial interface. Two programs are required: A Web browser is mandatory and a terminal program should be available optionally.

The board has several connectors.

- 4 x Ethernet RJ-45 jack; the Auto MDIX feature of the port switches automatically between MDI and MDI-X (MDI - X = Media Dependant Interface - Crossover). Therefore straight Ethernet cables can be used.
- 2 x RJ-11 jack (Line port is for VDSL client side connection to Line interface, Phone port is for connection to phone set or FAX machine).
- 1 x Console port (access monitoring to operating system for firmware downloads, starting drivers and etc.)
- 1 x Power Supply (as described above)

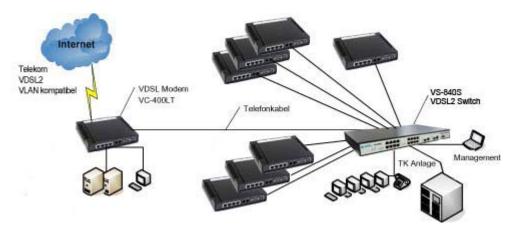

Figure 2.4 VDSL2 Basic Setup

Chapter 2. Hardware Description

This section describes the important parts of the VC-400LT/R. It features the front indicators and rear connectors.

VC-400LT Outward

VC-400RT+ + Outward

# 2.1 Front Panel

The following figure shows the front panel.

# 2.2 Six LED indicators

At a quick glance of the front panel, it will be easy to determine if the router has power signal from its Ethernet RJ-45 port or there is phone line signal RJ-11port

2.3 Front Indicators

LEDs	Color	Status	Descriptions
	Croop	On(Steady)	The device is receiving the power and functioning properly.
PWR(Power)	Green	Off	The device is not ready or has malfunctioned.
		On(Steady)	The device has a good Ethernet connection.
E1~E4 (LAN)	Green	Blinking	The device is sending or receiving data or has malfunctioned.
		Off	The LAN is not connected or has malfunctioned.
LINK / WAN		On(Steady)	The Internet or network connection is up.
(VDSL2 LINK)	Green	Blinking	The device is sending or receiving data.
		Off	The Internet or network connection is down or has malfunctioned.

#### The following table describes the LEDs.

#### Note:

Two Routers connection may take within 3 minutes is normal, due to VDSL2 CO/CPE ROUTER to establish a link mechanism is auto-negotiation, with detects and calculate CO and CPE both PBO and PSD level as well as noise level ....and other argument etc. for getting a better connection.

#### 2.4 Rear Panel

The following figure shows the rear connectors

#### Figure 3.4 Rear Connectors

#### VC-400LT/R Rear Connectors

Connectors	Туре	Description
Line	RJ-11	For connecting to the VDSL2 Router Using a RJ-11 cable
Phone	RJ-11	For connecting to the POTS equipment or ISDN router
E1~E4	RJ-45	For connecting to a Ethernet equipped device
Console	RS-232	For connecting to PC with RS-232 serial port over a D-SUB Cable

# 2.5 Power On

- 1. Check the adapter is properly connected.
- 2. Verify the power LED is steadily on.

# Chapter 3. Configure the VC-400LT/R Via Web Browser

The VC-400LT/R provides a built-in HTML based management interface that allow user configure the VC-400LT/R via Internet Browser. Best viewed at using the Internet Explorer or Firefox and set screen resolution at 1024 x 768.

In order to use the web browser configure the device, you may need to allow:

- Web browser pop-up windows from your device. Web pop-up blocking is enabled by default in windows XP SP2 or above.
- Java Scripts. (Enabled by default)
- Java permissions. (Enabled by default)

Launch your web browser and input the IP address 192.168.16.249 (VC-400LT) or 192.168.16.250 (VC-400RT+ ) in the Web ui.

#### 3.1 Login

The default password is "admin". The password is changeable in Administrator Settings.

LOGI	N PASSWORD
Password:	••••
	LOGIN CANCEL

Figure 4.1 Login Password

3.2 Select the Menu Level

There is an easy Setup Wizard for end users at the VC-400RT+ and an Advanced Setup for more detail configurations. This manual attaches importance to the Advanced Setup.

Figure 4.2 Select the Advanced Setup in the Entry Screen

#### 3.3 Select Advanced Setup

Select the Advanced Setup. The menu below will be used frequently. As an exercise and an example now the IP address will be set.

Vdsl2	

#### Figure 4.3 Advanced Setup

#### Note:

The settings in the following Section 4.4 only need to be performed in order to change LAN settings. Such a change may be necessary when connecting the VC-400LT/R to a new control PC and/or in order to turn the IP address changed via a shell command into a default address for the next restart of the board.

### 3.4 Select LAN

The menu below will not be used very often, but when connecting the VC-400LT/R to a new control PC, one may want to go through the following steps in order to make the IP address previously set by ifconfig in the console or on some later occasion one may want to change it again without using the console then the menu below will be helpful. In order to set the IP address, click on "LAN Settings".

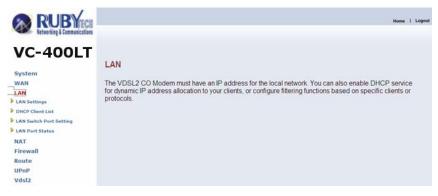

Figure 4.4 LAN menu

3.4.1 Select LAN Settings and set the IP Address

The form below is used to change the IP address of the LAN port "adm0" in the VC-400LT/R.

The proposed IP address is either the default address of adm0 or it is the address changed by an ifconfig command via the shell running in the terminal. The Subnet Mask display can be ignored. In case the DHCP checkbox is checked, some additional data and options will be on display (see Chapter 8.2.5.1). The DHCP server is not required to work with VDSL2 in a lab environment. It recommend to uncheck the box if it is not unchecked already.

RUBYECH Retworking & Communications			Hame   Logou

Figure 4.4.1 LAN Settings

Now the IP address either may be changed or left as it is. If it has been changed in the form or after it has been changed through console ifconfig command, it needs to be "APPLY" in order to make the displayed IP address new default address.

### 3.4.2 Restart the Settings Dialog

After the "APPLY" button has been hit, the displayed IP address "adm0" port will be stored in a non volatile memory on the VC-400LT/R. Also, the Ethernet link between the control PC and the VC-400LT/R will be re-initialized – even if the IP address has not been changed. Refresh the display of the HTTP browser running on the control PC and login again.

Addr: 1200007c, value: bffffff
BusyBox v1.00 (2006.05.29-14:43+0000) Built-in shell (ash) Enter 'help' for a list of built-in commands. / #

Figure 5.2 Command Line

# Note:

As you may identify from the commands above Industrial VDSL2 Router is a Linux based device. Many of the common Linux commands can be used here. However, please consider that you purchased a VDSL2 router device, not a PC. And always keep in mind that provider gives you support for configuring a standard VDSL2 router. If you try to use the VDSL2 router as a Linux hardware platform and modify its internal software structure, there is no support or warranty on the unit.

# 4.2 Check IP via CLI command

At the CLI command, write the command "ifconfig" to show the VDSL2 ip of web ui. Following screen is the VDSL2 CO ROUTER, the VDSL2 CPE ROUTER looks very similar. A screen is displayed as shown in Figure 5.3

BusyBox v1.00 (2006.05.29-14:43+0000) Built-in shell (ash) Enter 'help' for a list of built-in commands. / # ifconfig Link encap:Ethernet HWaddr 00:05:6E:02:00:00 adm0 inet addr: 192.168.16.217 Bcast:192.168.16.255 Mask:255.255.255.0 UP BROADCAST RUNNING MULTICHST MTU:1500 Metric:1 RX packets:159 errors:0 dropped:0 overruns:0 frame:0 TX packets:0 errors:0 dropped:0 overruns:0 carrier:0 collisions:0 txgueuelen:100 RX bytes:13616 (13.2 KiB) TX bytes:0 (0.0 B) Interrupt:9 10 Link encap:Local Loopback inet addr:127.0.0.1 Mask:255.0.0.0 UP LOOPBACK RUNNING MTU:16436 Metric:1 RX packets:0 errors:0 dropped:0 overruns:0 frame:0 TX packets:0 errors:0 dropped:0 overruns:0 carrier:0 collisions:0\_txqueuelen:0 RX bytes:0 (0.0 B) TX bytes:0 (0.0 B) /#

Figure 5.3 ifconfig

Note:

You can use the serial Interface to configure an IP address by this command:

ifconfig adm0 <ipadress> netmask <subnetmask> (Example: ifconfig adm0 192.168.16.217 netmask 255.255.255.0)

This configuration is activated immediately but is only temporary because not stored in flash memory. We recommend you continue configuring by Web method.

4.3 Reset the system to default configuration

At the CLI command, write the command "rawaccess -e" to reset the system to default configuration. For it to take effect write the command "reboot" to restart the system. A screen is displayed as shown in Figure 5.4

# rawaccess -e rawdev opened! (raw acs)ioctl: RAWDRV\_IOCRSFLASH # reboot

Figure 5.4 Reset to default via CLI command

#### Chapter 5. Building a VDSL2 System

First a quick overview on a complete setup of VC-400LT/R:

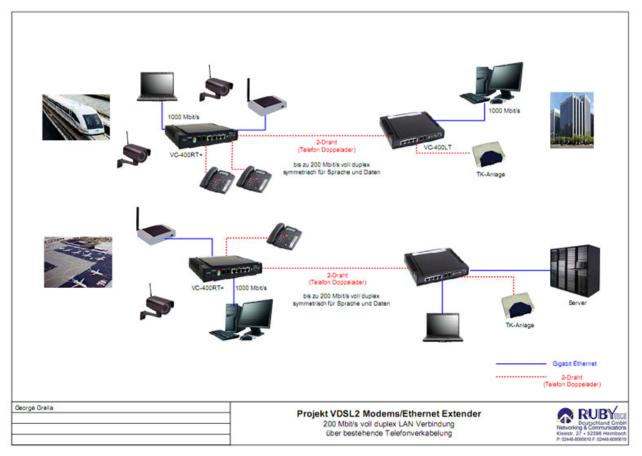

Figure 6 VDSL2 Application

5.1 Connect the VC-400LT and the VC-400RT+ to the Line

The objective for VDSL2 is to pass high speed data over a twisted pair cable. In the setup, connects VC-400LT to VC-400RT+ through phone wire or line simulator or any other hardware representation of a cable network, with or without noise injection and crosstalk simulations.

5.2 Connect the VC-400LT and the VC-400RT+ to LAN Devices

In the setup, usually an Ethernet tester serves as representation of the LAN side as well as representation of the WAN side.

5.3 Run Demos and Tests

The Ethernet tester may send data downstream as well as upstream. It also receives the data in order to check the integrity of the data transmission. Different data rates can be tested under different line conditions.

Chapter 6. Operating the VDSL2 System

After the VDSL2 system has been set up, one may want to configure the settings that are related to VDSL2.

Configuration of operation modes, test modes (loop back) and the display of status information are supported by GUI (Graphical User Interface).

## 6.1 Configuration Settings

Configure and start the VC-400LT (CO) and the VC-400RT+ (CPE).

• Configuration: As a minimum configuration, usually selecting the bandplan is required.

See Section 7.1.3, Profile Configuration.

- Next, both sides should be activated from the web interface. See Section 7.1.6, Line Activation
- The connection status of the link can be monitored. See Section 7.2.1, Line Status

### 6.1.1 Channel Configuration

This function is for setting VDSL2 channel.

VC-400LT	Channel Config		
System WAN	Configuration of line per bea	rer basis.	
LAN	Channel Number	Channel0 😒	
Firewall	Direction	Upstream	
Route	Min Data Rate	64	kbps
Vdsl2	Max Data Rate	102400	kbps
ChannelConfig LineConfig	Max Interleave Delay	1	ms
ProfileConfig			
b LoopBack			
ActivateDeactivate			
Une Status			
ChannelStatus			
VersionInfo SNRGraph			
BitsGraph			

Figure 6.1.1 Channel Configuration Menu

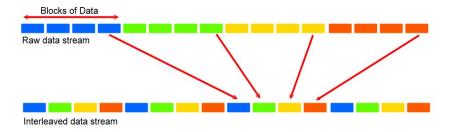

Interleave delay function is used in digital data transmission technology to protect the transmission against noise issue and data error.

If during transit more than a certain amount of data has been lost then the data cannot be correctly decoded. Short bursts of noise on the line can cause these data packets to become corrupt and the router has to re-request data which in turn can slow down the overall rate at which data is transmitted.

Interleaving is a method of taking data packets, chopping them up into smaller bits and then rearranging them so that once contiguous data is now spaced further apart into a non continuous stream. Data packets are re-assembled by your router.

The diagram below is an example of how interleaved traffic is transmitted.

If your line is particularly susceptible to bursts of noise then interleaving should improve your VDSL2 experience simply because if you lose a whole batch of data then this could cause your router to loose sync with the exchange.

Using Interleaving, the router is able to re-assemble the data or if necessary just re-request the part of the data that it is unable to recover. By increasing the interleave depth of each ports that are susceptible to noise, this will improve error performance and stability of marginal lines.

Setting	Description
Channel Number	To which bearer channel number shall the settings apply? <ul> <li>Channel 0</li> </ul>
Direction	To which direction shall the settings apply? <ul> <li>Upstream</li> <li>Downstream</li> </ul>
Min Data Rate	Minimum Payload Data Rate
Max Data Rate	Maximum Payload Data Rate
Max Interleave Delay	Maximum Interleave Delay (set from 0 to 255ms)

#### **Channel Configuration Settings**

# Note:

1.Regarding the interleave delay value time function for anti-noise purpose, due to the noise of each environment are different, so you could adjust interleave delay value when filed environment has heavy noise. Please note that increase interleave delay time will reduce few vdsl2 bandwidth and depond on interleave delay time.

2. The Min and Max Data Rate function similar rate control function, you can limit rate for the VDSL2 port.

3. Please note you must deactivate then activate once on config port when you config VDSL2 arguments.

# 6.1.2 Line Configuration

Figure 6.1.2 Line Configuration Menu for SNR Margin Selection

Line Configuration

Setting	Description					
Direction	Select the target direction.					
Target SNRM	Set the required SNR Margin *10					
Target SNRM	(60=6dB)					

Note:

Noise Margin is the non-technical term for Signal to Noise Ratio Margin (SNRM). Domestic standard modems and VDSL2 routers often use the terms Noise Margin or SNR when reporting on its value. The Signal to Noise Ratio, as its name implies, is the ratio between the strength of the signal and the level of noise on the line.

That ratio is a major factor in determining the connection speed, as the higher the ratio the higher the possible speed. The SNRM is a margin which by which the noise level can rise before connection is lost.

Taking the default (target) value of 6 dB applied is follow up telecom standard. Basically, you don't need adjust this value.

# 6.1.3 Profile Configuration

For this function, VC-400LT/R provides world wide telecom standard band plan, such as meet European telecom standard band plan 998(17a), USA telecom standard band plan 997(8a, 8b) and APAC Telecom standard band plan (30a) etc.

- Annex A specifies bandplans for the North American region and enables VDSL2 ROUTER to be deployed with traditional POTS telephony or in an all-digital mode.
- Annex B specifies bandplans for Europe and enables VDSL2 ROUTER

deployment with underlying POTS and ISDN services.

 Annex C allows VDSL2 ROUTER to coexist with TCM-ISDN services, found primarily in APAC.

VC-400RT+whas numerous configuration profiles and bandplans to meet regional service provider requirements. The frequency bandwidth has increased to 30 MHz, with configuration options at 8.5 MHz, 12 MHz, 17.7 MHz and 30 MHz.

Band profile and band plan can only be configured at VC-400LT as VC-400RT+ will auto-follow up on the settings of VC-400LT. The only thing that VC-400RT+ must be configured so that the routers will link is the tone mode. However, the default tone mode for VC-400LT/R is V43, so at default there's no need to change the tone mode unless it is required by the telecom companies to use different tone mode. Another important thing is that band profile and band plan setting must be compatible to each other if not access error will show when applied. Please deactivate and activate once the setting has been changed.

Note: O = Compatible; X = Not Compatible

The following phone wire distance and data rates are possible according to the band profile and band plan setup:

# Comment:

Downstream: Traffic from Transmitter to Receiver Upstream: Traffic from Receiver to Transmitter

# Default plan profile and band plan = 30a and C8K

Distance	0-350m	350-450m	450-600m	600-900m	Beyond 900m
Downstream	100Mbps	70-85Mbps	40-60Mbps	20-40Mbps	Х
Upstream	100Mbps	40Mbps	10Mbps	1-5Mbps	Х

Note:

Using Band profile 30a and band plan C8K for distances beyond 900m is not recommended.

# Alternative band profile and band plan = 8d and M1\_EU32

Distance	0-800m	800-1200m	1200-1500m	Beyond
				1500m
Downstream	60-80Mbps	30-50Mbps	30Mbps	Х
Upstream	15Mbps	5-10Mbps	2-5Mbps	Х

Note:

Using Band profile 8d and band plan M1\_EU32 for distances beyond 1500m is not recommended.

Note:

The performance data above is for reference only, the actual data rate will vary on the quality of the copper wire and environment factors.

6.1.4 Loop Back

Loopback (loop-back) describes ways of routing electronic signals, digital data streams, or flows of items from their originating facility back to the source without intentional processing or modification. This is primarily a means of testing the transmission or transportation infrastructure.

The loop back testing function for checking phone wire link problem: 1. System Loop. 2. Line Side Loop

To config the Loop Back, click on the "Loop Back" link in the left navigation bar. A screen is displayed as shown in Figure 6.1.4

	-	
VC-400LT	Loop Back

 Loop
 System loop or line side loop

 State
 Activate or deactivate loop back within the transmission convergence layer

- Click APPLY at any time during configuration to save the information that you have entered.
- Click CANCEL to exit from this page without saving the changes.

Example applications(Only reference):

- Performing transmission tests of access lines from the serving switching center, which usually does not require the assistance of personnel at the served terminal.
- Testing between stations (not necessarily adjacent) where in two lines are used, with the

test being done at one station and the two lines interconnected at the distant station. Commonly called loop around when the interconnecting circuit is accessed by dialing.

- A patch cable, applied manually or automatically, remotely or locally, that facilitates a loop-back test.
- A communication channel with only one endpoint. Any message transmitted through such a channel is immediately received by the same channel.
- Required the packet generator, if you would like to use loop back test function.

### 6.1.5 Line Activation

Regarding the describe of "tone graph"(Only reference):

"If slow service is indicated, technicians can look at the bits per tone measurement. Dips in the bit per tone graph indicate interference. Checking the frequency of the interference often makes it possible to identify its cause. The accompanying chart shows the frequencies associated with common interference sources, such as T1,E1 and HDSL. If the bits per tone are taking a hit and it is determined that noise is not the cause, then the cause could be a DC fault, such as a bridge tap or a wet section. Very low or nonexistent bits per tone in the high frequency band indicate the presence of a long loop. If there is a major dip in the bits-per-tone graph but the noise power-per-tone graph does not show any abnormalities, the most likely troubles are bridged taps or

wet sections on the span. Use a loop-troubleshooting tool with a TDR to find and fix these problems. If the bits per tone are low across the whole bandwidth, the cause is most likely DC troubles on the loop, such as shorts or grounds. A major dip in bits per tone indicates AC trouble on the loop. To verify the type of AC trouble, compare the bits per tone to SNR. If the noise influence and bits-per-tone dip occur at the same frequency, the degraded performance is most likely due to a transmission influence. The particular frequency will help identify the source of influence or crosstalk.

Chapter 7. Configuration Interface of the Router

This section explains how to configure the router section of the VC-400LT/R using its web-based configuration.

The part of the circuitry as well as the router configuration menu has been ported from that of the reference kit to the VC-400LT/R reference board. As for the menu, there are only a few differences:

- The "adm1" port now is the port to the VDSL2 side. The port on the LAN is "adm0". It supports four Ethernet connections.
- The IP addresses are used in this chapter are different from the examples in the previous chapters.
- The password used in this chapter is different from the examples in the previous chapters.
- 7.1 Logging in to the VC-400LT/R

To log on to the VC-400LT/R Web Application, you must have a valid password. The Administrator creates the log on user with its password. When one log on to the VC-400LT/R Web Application, the LOGIN PASSWORD window is displayed as shown in Figure 7.1.

LOGI	NPASSWORD
Password:	

Figure 7.1 VC-400LT/R Web Application

In the LOGIN PASSWORD window:

- 1. Enter the password in the Password text box. For an Admin user, the default password is "admin".
- Click LOGIN to begin the configuration or click CANCEL in the LOGIN PASSWORD window to cancel this log on operation.

7.2 Setup Wizard and Advanced Setup

There is an easy Setup Wizard for end users at the VC-400RT+ Router only and an Advanced Setup for more detail configurations for both VC-400LT/R. This manual gives importance to the Advanced Setup.

Figure 7.2 Select the Advanced Setup in the Entry Screen

7.2.1 Setup Wizard

The Setup Wizard is designed for ease-of-use in order to quickly configure the most common settings. The Admin can view the Setup Wizard link in the homepage. The wizard first step is to allow the admin to configure the system host settings displayed as shown in Figure 7.2.1.

Figure 7.2.1 Setup Wizard's First Step

Note:

There are four steps to complete the wizard. Follow the instructions given in each step and enter the desired settings.

Click on the Advanced Setup link in the homepage in case you want to configure a wider range of settings. The following configuration options are displayed in the left navigation bar, as shown in Figure 7.2.2.

- System 
   Firewall
  - WAN Route
- LAN
- UPnP
- NAT
   VDSL2

# 7.2.3 System

The System link can be viewed in the left navigation bar. The following are the options available under System, as shown in Figure 7.2.3.

- Administrator Settings

- Click CANCEL to exit from this page without saving the changes.

## 7.2.5 LAN

The LAN Setting can be viewed in the left navigation bar. The following are the options available under LAN, as shown in Figure 7.2.5:

- LAN Settings
- DHCP Client List
- LAN Switch Port Setting
- LAN Port Status

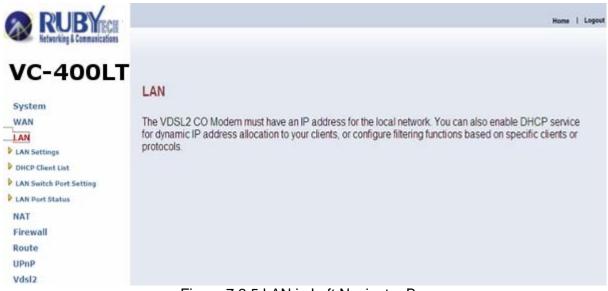

Figure 7.2.5 LAN in Left Navigator Bar

## 7.2.5.1 LAN Settings

Note:

For the VC-400LT/R it is recommended to select a simple IP setting suitable to controlled lab environments. Set a static IP address and don't use DHCP. The required steps are explained in section 4.4.1.

To configure the LAN interface, click on the "LAN Settings" link in the left navigation bar. A screen is displayed as shown in Figure 7.2.5.1 in case of the VC-400LT/R.

The screen contains the following details:

#### Fields in LAN Settings:

Field	Description
IP Address	Enter the LAN interface IP Address of VC-400LT/R. (Web IP)
Subnet Mask	Enter the LAN Subnet Mask of VC-400LT/R.
The Gateway acts as DHCP Server	Enable or disables the DHCP Server of the VC-400LT/R. Select the check-box to enable this option.

- Click APPLY to save the information that has been entered.
- Click CANCEL to exit from this page without saving the changes.

## 7.2.5.2 DHCP Client List

To view the DHCP client list, click on the "DHCP Client List" link in the left navigation bar. A screen is displayed to list all DHCP client connection with IP Address and MAC Address as shown in Figure 7.2.5.2.

#### 7.2.6 NAT

Network Address Translation(NAT) allows multiple users at your local site to access the internet through a single public IP address or multiple public IP address. NAT can also prevent hacker attacks by mapping local address to public address for key services such as the Web or FTP.The NAT Settings can be viewed in the left navigation bar of VC-400RT+ only. The following are the options available under NAT, as shown in Figure 7.2.6:

- Virtual Server
- Port Mapping
- DMZ

Figure 7.2.6 NAT in Left Navigator Bar

To configure virtual server, click on the "Virtual Server" link in the left navigation bar. A screen is displayed as shown in Figure 7.2.6.1:

<b>V</b> C-450RT	Virtual Server

- Click CANCEL to exit from this page without saving the changes.

#### 7.2.8 Route Settings

The Route Settings can be viewed in the left navigation bar. The following are the options available under Route, as shown in Figure 7.2.8:

- Static Routing
- Routing Table List

Figure 7.2.8 Route in Left Navigator Bar

#### 7.2.8.1 Static Routing

To setup Static Routing, click on the "Static Routing" link in the left navigation bar. A screen is displayed as shown in

Figure 7.2.8.1.

Figure 7.2.8.1 Static Routing Configuration

The screen contains the following details:

#### Fields in Static Routing:

Field	Description
Destination LAN IP	Enter the IP Address 0-0-0-0 of routing entry.
Subnet Mask	Enter the Subnet Mask 0-0-0-0 of routing entry.
Gateway	Enter the Gateway address of routing entry.

• Click Add to add the information that has been entered.

Note:

- Static Routing functionality is used to define the connected Gateway between the LAN and WAN. For example,
- if we want to activate the Network Time Protocol (NTP) service, and we have to define the Gateway connected

to NTP server in the WAN.

7.2.8.2 Routing Table List

To view the Routing entry table list of VC-400LT/R, click on the "Routing Table List" link in the left navigation bar.

A screen is displayed as shown in Figure 8.2.8.2.

Appendix A: Product Features & Specification

Features:

- Compliant with IEEE 802.3 & 802.3u Ethernet Standards
- Compliant with G993.2 VDSL2 standards
- Provides 4 x 10/100M auto-sensing RJ-45 Ethernet ports
- Supports Bandwidth up to 100Mbps over RJ-11 ports
- POTS / ISDN Splitter port RJ-11 x 1 (Splitter on board)
- Support Downstream Power Back-Off(DPBO)
- Supports auto speed for VDSL2 port
- Supports Web management (HTTP)
- Supports uPnP/PPPoE/NAT/DHCP/DMZ/Firewall
- Supports Console (RS-232C)
- Supports Route & Switch (Bridge) mode
- Supports Loop back test
- Supports SNR indicator for checking phone wiring quality
- Supports Interleave Delay to prevent against noise and data errors
- Support 8a, 8b, 8c, 8d, 12a, 12b, 17a, 17b, and 30a band profile
- Support 997, 998 band plan
- Provides surge protection for VDSL2 port

Specifications:

	Standard:	IEEE802.3 standard
		IEEE802.3u standard
		Compliant G993.2 VDSL2 standard
	Interface:	4 * RJ-45 10/100Mbps Ethernet port
		1 * RJ-11 connector for VDSL2
		1 * RJ-11 connector for POTS/ISDN device
	Band Profile:	8a, 8b, 8c, 8d, 12a, 12b, 17a, 17b, 30a

	AC to DC	Input range: 85VAC~240VAC/50~60Hz
adapte	er:	Output: 12V DC/1A
	EMI Compliant:	CE, FCC, VCCI
	Chipset:	Lantiq MIPS ADM5120P / VINAX

# VC-400LT/RT+ VDSL2 CO&CPE Router MANUAL Ver.B3 Appendix B: Troubleshooting

	Connected the CO Router with CPE Router within 300 meters RJ-11 phone	
1. Symptom:	cable got only less than 10 Mbit/s.	
Cause:	Some testing program which is base on TCP/IP protocol such as FTP, Iperf,	
Cause.	NetIQ, the bandwidth of testing outcome will be limited by TCP window size.	
	We recommend to test VDSL2 bandwidth best by Smartbit equipment, if you	
Solution:	don't have Smartbit, we recommend test that by IPERF program, and TCP	
	window size must be settled max. 64k, the parameter as iperf –c server IP	
	address –i 1 –t 50 –w 65535 for client side.	
2. Symptom:	VDSL2 CO router cannot link with CPE router.	
	1. The VDSL2 CO/CPE mode settings of VDSL2 router become unknown.	
Cause:	2. VDSL2 CO and CPE router tone mode is different due to mixed use of new	
	and old hardware VDSL2 routers.	
	1. Using the console, reboot the system and go to loader menu. Select set boot	
	parameters and select the VDSL2 CO/CPE mode correctly. Select "1" if it is CO	
	router and "0" if it is CPE router. Do not just press enter to skip the setting as it	
	will not retain even if the setting is correct, then it will become unknown causing the VDSL2 router not to link. 1: VC-400LT. 0: VC-400RT+ .	
	[5] Update bootloader [6] Exit	
Solution:	Please enter your number:3 Print Boot Parameters.	
	Serial number: VDSL2_modem Hardware version: C.1 Mac addres:00-05-6E-01-12-26	
	Number of Mac address:1 VDSL2_C0/CPE_Node (1/0): 0	
	Please confirm 1: CO Site(IVV-600E) 0: CPE Side(IVV-600R) Loader Henu	
	111 Xmodem Download 121 TFTP Client Download 131 Print Boot Params	
	[ [4] Set Boot Params	
	<ol><li>Update the old hardware to D series firmware so that you can set the same tone mode for both CO and CPE router.</li></ol>	
3. Symptom:	VDSL2 web management that uses public IP address cannot be accessed.	
	It can be affected by come incoming traffic nervous with any large ways	
Cause:	It can be affected by some incoming traffic perhaps web crawlers, worms or other automated activity.	
	Open a command prompt and log in to telnet by writing "telnet xxx.xxx.xxx.xxx",	
Solution:	xxx is the IP address of your router, then write "cd /etc/rc.d/init.d" to go to this	
	folder, then write "./httpd start" to open the web management, so that it can be	
	accessed again.	

#### Appendix C: Cable Requirements

A CAT 3, 4 or 5 UTP (unshielded twisted pair) cable is typically used to connect the Ethernet device to the modem. A 10Base-T cable often consists of four pairs of wires, two of which are used for transmission. The connector at the end of the 10Base-T cable is referred to as an RJ-45 connector and it consists of eight pins. The Ethernet standard uses pins 1, 2, 3 and 6 for data transmission purposes. (Table C-1)

	MDI		MDI-X		
PIN #	Signal	Media Dependa nt interface	Signal	Media Dependant interface-cross	12345678

## Appendix D : Compliance and Safety Information

## FCC Radio Frequency Interference Statement

This equipment has been tested to comply with the limits for a computing device, pursuant to Part 15 of FCC rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment can generate, use and radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by taking one or more of the following measures:

- 1. Reorient or relocate the receiving antenna.
- 2. Increase the distance between the equipment and receiver.
- 3. The equipment and the receiver should be connected to outlets on separate circuits.
- 4. Consult the dealer or an experienced radio/television technician for help.

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

If this telephone equipment causes harm to the telephone network, the telephone company will notify you in advance that temporary discontinuance of service may be required. But if advance notice isn't practical, the telephone company will notify the customer as soon as possible. Also, you will be advised of your right to file a complaint with the FCC if you believe it is necessary. The telephone company may make changes in its facilities, equipment, operations or procedures that could affect the proper functioning of your equipment. If they do, you will be notified in advance in order for you to make necessary modifications to maintain uninterrupted service.

This equipment may not be used on coin service provided by the telephone company. Connection to party lines is subject to state tariffs.

#### Important Safety Instructions

- Caution: The direct plug-in wall transformer serves as the main product for disconnecting.
   The socket outlet shall be installed near the product and be readily accessible.
- Caution: Use only the power supply included with this product. In the event the power supply is lost or damaged: In the United States, use only with CSA certified or UL listed Class 2 power supply, rated 12Vdc 1A or above.
  - IN Europe, use only with CE certified power supply, rated 12Vdc 1A or above.
- Do not use this equipment near water, for example in a wet basement.

- •
- Avoid using a telephone during an electrical storm. There may be a remote risk of electrical shock from lightning.
- Do not use the telephone to report a gas leak in the vicinity of the leaking area.
- If you experience trouble with this unit, please contact customer service of your dealer immediately.
- DO NOT DISASSEMBLE THIS EQUIPMENT. It does not contain any user serviceable components.

#### FCC Warning

This equipment has been tested to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment can

generate, use, and radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at owner's expense.

CE Mark Warning

This is a CE class A product. In a domestic environment, this product may cause radio interference in which case the user may be required to take adequate measures.

#### WEEE Warning

To avoid the potential effects on the environment and human health as a result of the presence of

hazardous substances in electrical and electronic equipment, end users of electrical and electronic

equipment should understand the meaning of the crossed-out wheeled bin symbol. Do not dispose of

WEEE as unsorted municipal waste and have to collect such WEEE separately.

#### Warranty

The original owner of this package will be free from defects in material and workmanship for one year parts after purchase. For the warranty to apply, you must register your purchase by returning the registration card indicating the date of purchase.

There will be a minimal charge to replace consumable components, such as fuses, power transformers, and mechanical cooling devices. The warranty will not apply to any products which have been subjected to any misuse, neglect or accidental damage, or which contain defects which are in any way attributable to improper installation or to alteration or repairs made or performed by any person not under control of the original owner.

The above warranty is in lieu of any other warranty, whether express, implied, or statutory, including but not limited to any warranty of merchantability, fitness for a particular purpose, or any warranty arising out of any proposal, specification, or sample. We shall not be liable for incidental or consequential damages. We neither assume nor authorize any person to assume for it any other liability.

WARNING:

WARNING Warranty Void If Removed

- 1. DO NOT TEAR OFF OR REMOVE THE WARRANTY STICKER AS SHOWN, OR THE WARRANTY IS VOID.
- 2. WARRANTY VOID IF USE COMMERCIAL-GRADE POWER SUPPLY IS USED AT INDUSTRIAL ENVIRONMENTS.
